GoLocal

Local services, booked by your personal agent.

One booking layer for agents and local businesses.

Personal agents need live local-business data

Users once called businesses to scope the job.
Personal agents can now scope it with the customer, then act on live business data.

Get quotes & schedule	**Missing today**: a live data layer with business pricing and availability. Without it, agents cannot complete scheduling, booking or payment.				
Book & pay					

The live data layer that enables agent bookings can capture value from the $1.2T local-services spending pool.

≈$1.2T annual U.S. spending across selected categories; mixed 2023–25 sources, including materials/DIY.

One booking layer for agents and local businesses

We connect participating businesses through the software they already use.

Agents reach local supply through one connection.

Businesses reach connected agents through one integration.

THE CUSTOMER EXPERIENCE

GoLocal turns a scoped job into a better booking

Agents can scope the job today. Live business data changes how they find the right provider.

TODAY	Search Google listings. Call 2–3 businesses. Check price and availability one at a time.	A narrow search can miss better matches. Repeated browsing and calls consume tokens.
WITH GOLOCAL	Search hundreds of connected businesses. Target: match in a fraction of a second.	Compare price, live availability, specialization and past transaction reviews to find the best fit.

THE GOLOCAL BOOKING JOURNEY

“Book a plumber tomorrow morning for my leaking kitchen tap.”

1 Agent scopes the job

Agent works with user and Go-local to scope the work with photos and questions

2 GoLocal compares

Finds suitable providers across ratings, availability and pricing

3 Customer approves

Chooses best match
Authorizes the $79 visit and payment.

4 GoLocal books

Books in provider system.
Returns booking ID and payment status.

Confirmed: Oak Plumbing, tomorrow 9–11 am

Booking GL-1042. $79 visit fee authorized.

Local bookings can build a stronger local network

One city and one service category first.

1 Build a local market

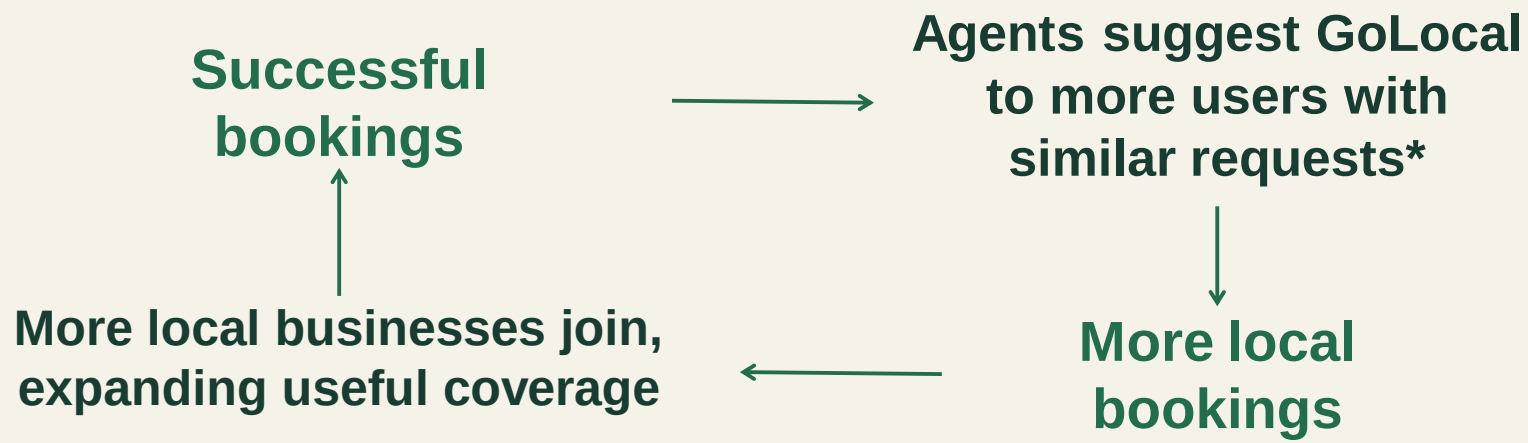

Recruit providers and users with a specific booking need in one city and category.

2 Connect their agents

“Add GoLocal to find me local services.”

One-time setup on a compatible agent, with sign-in and approval.

3 The network effect

Proof in one city supports more categories there, then expansion into more cities.

REVENUE MODEL

Businesses pay 10% of the booking amount. That 10% fee is shared between GoLocal and software or channel partners.

First pilot lined up in Salt Lake City

60+ plumbing companies already in the pipeline.

50+

Cactus AI

YC-backed AI front office for local trades.

10+

YourCardare

Regional back-office partner.

30-day target: launch the GoLocal MCP

Onboard pilot providers → **Connect live pricing and availability** → **Launch MCP and test first agent bookings**

Built for consumer apps.
Now building for the agent layer.
